

TECH TALK

Dinner and Discussion with the Young Dairy Network

Join us for dinner and discussion with the Young Dairy Network and **ecosat** engineer, Chris Glanville.

ecosat is a satellite technology used to remotely monitor and control farm infrastructure including fences, gates and water pumps.

Get a preview of the technology, learn how it works and understand what it can achieve for farm businesses.

About the Young Dairy Network

The Young Dairy Network is open to young farmers, new entrants, service providers and students in the dairy industry.

The network provides opportunities for social networking, professional development and skills-building through Discussion Groups, workshops and events.

New members are always welcome.
